Abstract (en)
[origin: WO0159053A1] A fabric care composition comprises one or more textile compatible carriers and an amphoteric polymer which is capable of self cross-linking and/or of reacting with cellulose and which preferably comprises two or more isocyanate end groups. The compositions may be used to treat fabric as part of a laundering process and improve the surface colour definition of the fabric following multiple washings and/or impart pill and/or fuzz resistance to fabric during laundering.
