Abstract (en)

[origin: US6681813B2] The invention relates to a device for the removal of fluid from a container (10), which carries a gas and which in the area of a collection point (12) for the liquid has a removal connection (14), to which can be connected a collection container (18) by means of a removal conduit (16), which container can be connected through an equalization conduit (20) with an equalization connection (22) arranged on the container (10), which connection is different from the removal connection (14). In this manner a liquid removal device of small structure is made available as a maintenance unit which can be connected with only very short time period of the container being out of commission and in turn can also be rapidly separated therefrom.
