Abstract (en)
[origin: WO0159500A1] The invention concerns a sleeve (10) comprising, along a common axis (A), a first substantially cylindrical portion (11) and a second substantially conical portion (12), said first and second portions being perforated with an axial bore (13). The sleeve (10) bears over its entire length a continuous slot communicating with said axial bore (13) formed by a first longitudinal slot (110) in the first portion (11) of the sleeve and a second helical slot (120) in the second portion (12) of the sleeve. The invention is useful for inside wiring of buildings with optical cables.
