Abstract (en)

[origin: WO0159795A1] The invention relates to an electromagnetic switchgear comprising at least one pair of contacts which can move in relation to each other (2, 3). An indicator element (1,6) is firmly connected to each of the contacts (2, 3). One (6) of the indicator elements (1, 6) is provided with a marking (11) which co-operates with a marking (12) on another indicator element (1). According to the invention, said marking (11) is applied to the indicator element (6) after the indicator elements (1,6) have been connected to the contacts (2,3).
