Abstract (en)
[origin: US2002163162A1] A binding (2) which retains a boot (11) on a snowboard (1) includes a base member (4). Rear walls (8a, 8b) and a rear arch (9) with a rear portion (21) of the base member support a heel of the boot. A front support piece (18) to which a toe strap (16) is pivotally mounted (24a, 24b), is adjustably mounted to a front part (20) of the base member. The front support piece is longitudinally adjustable and a length of the toe strap is adjustable to enable the binding to receive boots of different length and style.
