Abstract (en)  
[origin: EP1254842A1] Plastic container comprises a container part and a lid part having an illustration. The container part has a stacking shoulder, and the lid part has a laterally protruding handle part. A catch element (6) and a catch recess (7) in at least one peripheral position on the container part secure the relative angle position in the stacked position and their position relative to each other and the lid part so that the illustrations on the container part and the lid part coincide after the plastic container is sealed. Preferred Features: The catch element has a shape tapering upward. The catch element and the catch recess are formed by indentations in the plastic film of the container side wall (12).
