Abstract (en)

[origin: DE10121900A1] The post mounting has a post element holding unit fastened to a base component fastened to a wall. The post element holding unit has at least one clamping device (22) and at least one alignment device (24) which are spaced apart and for independent clamping and alignment of the post element. The clamping unit has a post element holding component (26) connected with positional stability to the base section (18). A clamping component (28), which in the clamping position is in contact with the post element, is fastened to the holding component by means of a detachable non-destructive clamping connection (30).
