Abstract (en)

[origin: EP1255004A2] Door handle unit for a motor vehicle door lock comprises a handle (1), and an adapter plate (3) fixed on a door (2) for pivotably receiving a bearing arm (4) of the handle. In a first step the handle is inserted in a bushing (5) on the adapter plate to form a signal connection, and in a second step the handle including the bushing is moved into its functional position. Preferred Features: The handle and the bushing form a socket connection in a direction (6) perpendicular to the door plane (E). The handle is moved into its functional position in the direction (7) of the door plane.
