Abstract (en)

[origin: WO02051293A1] The invention concerns an electrical household food processor, comprising a housing (11), a bowl (1) and a lid (3), the housing including a locking component (20) mobile between an active locking position and a stable unlocked position, a switch (10) enabling the motor to operate when the locking component (20) takes up the active locking position, the lid (3) closing the bowl (1) co-operating with a control element (30) mounted in the housing (11) and separate from the locking component (20). The invention is characterised in that the locking component (20) co-operates with the switch (19) via the control element (30), which is mobile against return means (39) between a neutral position, or return position, wherein the switch (19) prevents the motor (17) from operating, and an active position wherein the switch (19) allows the motor (17) to operate.
