Abstract (en)

[origin: WO0161116A1] The invention relates to a construction kit for producing an installation with a sanitary facility that is flushed with water, such as a WC, urinal or similar, in the form of a front wall-corner installation, comprising a waste water down pipe which is situated in the corner of the room, an installation for providing a volume of water, a device for fixing the sanitary facility and the appropriate WC or urinal bowl. The aim of the invention is to provide an extremely compact device which makes optimal use of the corner of the room and which has a high degree of variability of adaptation to different assembly dimensions. The device should also make optimal use of the space available and enable optimal facing of the necessary elements. To this end, the flush cistern (3) or a flushing valve housing is equipped with a rear wall (7) which corresponds to the diameter of the down pipe and which is curved inwards, for partially looping around the down pipe (5a), and with fixing elements (9) for attachment purposes.
