Abstract (en)

[origin: WO0157479A1] The invention concerns a dose-measuring device designed to be inserted in the neck of a flask (2) comprising a first metering compartment (A) and a second reserve compartment (B) communicating with the outlet of the measuring device and the metering compartment (A). The invention is characterised in that it comprises an outer tubular element (4) nested in the neck (2a) of the flask (2), closed at its lower end and open at its upper end, and an inner tubular element (5) nested sealed in the outer tubular element (4), comprising an intermediate body (16), delimiting inwards, the metering compartment (A) and a lower part forming a transfer conduit (23) extending downwards emerging into the metering compartment (A) and in the reserve compartment (B).
