Abstract (en)

[origin: WO0161629A2] A method and system for displaying feedback in an electronic reading device system. An electronic reading device is used to detect portions of an address pattern on a formatted surface. The detected portions are converted into feedback that is then displayed on an electronic display device. The feedback can include a textual representation of information written with the electronic reading device, help information for an application associated with the adress pattern, or a retrieval of other stored information.
