Abstract (en)
[origin: EP1256662A2] The insulating casing consists of a drip-proof bottom shell (21) and an upper shell (22) as grasped in part by a droplet shaped cover (23). The bottom and possibly upper shells (22) are joined across the cover by an elastic tape (3) held in a groove running round the outer casing of the insulating casing. The top and bottom shells are held together by mating pins plugging home in an opening in the plane (25) between the two shells (22). Neck pieces (21a,22a) in top and bottom shells project from the wall and thus grant access to the fitment body.
