Abstract (en)
[origin: DE10122125C1] The lock cylinder has a housing (1) with a lock core (22) and adaptor (30). A spring pin (18) fits in a recess (13) in one end of the housing bore and is connected by a through opening (12) to a guide channel. By pivoting of the lock core (22) from the change position, together with the inserted tool, the spring pin can be removed from engagement with an annular groove in a connecting seating of the cylinder core for withdrawal from the core.
