Abstract (en)
[origin: EP1256759A2] A long field light comprises a lamp housing (1) with primary and secondary sections (2,3), a switch (21), and a manually actuatable closure unit (6). A long field light comprises a lamp housing (1) with primary and secondary sections (2,3), a switch (21), and a manually actuatable closure unit (6). The latter keeps the housing sections locked together in a primary position and allows them to move with respect to each other in a secondary position. An actuating member can move between the two positions, and a lever outside the housing works in conjunction with the closure unit. When in a primary position, the lever prevents the closure from moving, but when in a secondary position, the lever releases the closure unit so it is free to move.
