Abstract (en)
A security enclosure (10) for guarding access to a facility, said security enclosure (10) having an inner housing (11) supported by an outer housing (12) by sensing means which may be a load cell (34) or a spring (26B). There is provided a pin assembly (25) interconnecting the inner housing (11) and the outer housing (12), which is connected to the load cell (34) or spring (26B). When a load is imparted to the load cell or spring by a person gaining entry to the inner housing (11), access to the facility will be provided when the load is under or is equal to a prescribed value. <IMAGE>
