Abstract (en)
The invention relates to a dispensing machine for printed publications. The vending machine allows to dispense one copy at a time by providing a metering break above a dispensing channel. The vending machine has a hollow housing, within which a detachable module is slidable mounted. An operational portion of the machine includes a drive screw connected to a motor by a gear assembly. The printed publications are supported in an upright position on a bearing plate and are advanced towards the dispensing channel by a push plate connected to the drive screw. <IMAGE>
