Abstract (en)

[origin: WO0158734A1] The invention concerns a device for dusting and/or cleaning and/or disinfecting consisting of at least two cleaning heads (5) each fixed on a support rod (3), the support rods being mounted on a base (12). The heads (3) and the rods (5) are designed to be adapted in dimensions and materials to the surface to be treated and to the type of treatment desired. In particular the heads can be elongated or curved, made of plastic or inflatable or porous or cleaning material, and the rods can be straight or curved, more or less long. The base has an appropriate form to be easily manoeuvred by the user, or to be fixed to the connecting piece of a vacuum cleaner or an aerosol container or any other container provided with an outlet for the product inside. The inventive device enables fast, easy and efficient cleaning, and is inexpensive.
