Abstract (en)

[origin: WO0162619A1] Improved lid (95) applied by pressure to cans (52) containing drinks openable by means of a strip (57) prepared for fracture with a handle (100) to facilitate detachment of the lid (95) facing upwards, when idle, and joined below to the edge of said lid that, at the position of the handle (100), presents prepared fracture areas (107, 108) that, when the handle (100) is pulled to detach the lid (95), produce in its walls (96) fractures (104, 105) able to indicate that the lid (95) has already been removed for partial consumption of the drink even if said lid (95) has then been replaced on the can (52).
