Abstract (en)

[origin: WO0157081A2] The present invention relates to a newly identified human and mouse programmed cell death (PCD) protein having homology to mammalian subtilases. The invention also relates to polynucleotides encoding the protein. The invention further relates to methods using the polypeptides and polynucleotides as a target for diagnosis and treatment in disorders mediated by or related to the protein. The invention further relates to drug-screening methods using the polypeptides and polynucleotides to identify agonists and antagonists for diagnosis and treatment. The invention further encompasses agonists and antagonists based on the polypeptides and polynucleotides. The invention further relates to procedures for producing the polypeptides and polynucleotides.
