Abstract (en)  
[origin: WO0162883A1] The invention relates to agglomerates containing layered silicate, with non-ionic tensides, for use as a detergent additive. The agglomerates contain at least one natural or synthetic layered silicate chosen from the group of clays containing montmorillonite, especially betonite, and attapulgite, hectorite and/or beidellite, the quantity thereof being more than 10 wt. % in relation to the total quantity of support materials; at least one precipitated silicic acid, the quantity thereof being at least 12 wt. %, and at least one non-ionic tenside, the quantity thereof being more than 50 wt. %. No compaction or extrusion takes place during the production of the agglomerates.
