Abstract (en)

[origin: WO0161073A2] The invention relates to a method and device for pickling rolled metal, in particular steel strip, whereby the metal strip (1) is fed to a controlled pickling method. The aim of the invention is to carry out the pickling method, taking into account not just the usual parameters, but also additional parameters from outside the pickling bath. Said aim is achieved, whereby the pickling method is controlled by parameters of the coil (2) and/or the metal strip, determined and/or measured before the metal strip is fed into the pickling section (3), in addition to the pickling medium parameters.
