Abstract (en)
[origin: WO0138903A1] The present invention relates to a method for correcting or providing weather forecasts and to a weather warning method applicable for alerting a user. Alerting a user is being based on a user profile comprising at least one surveillance parameter to be monitored, such as wind speed, temperature, incident solar radiation and/or humidity, a changeable position parameter governing the geographical position of monitoring the at least one surveillance parameter and a surveillance function prescribing at least one alerting criterion. The alerting method comprising extracting/looking up from the weather forecast, weather characteristic(s) corresponding to the position parameter and to the surveillance parameter(s), and evaluating the surveillance function so as to determine whether the owner of the user profile is to be alerted.
