Abstract (en)

[origin: WO0142906A1] An apparatus and method for processing a request. The method comprises receiving an input text expression from a user on a device (410), parsing the input text expression to identify a keyword (412), determining a connector based on the keyword (416), filling in a template in the connector (423) based on the input text expression, launching an agent identified by the connector based on the template (428) to perform predetermined tasks.
