Abstract (en)

[origin: WO0163621A1] The invention concerns a container for transporting or storing radioactive materials comprising two separate confinement chambers, nested one in the other. The outer confinement chamber comprises at least an inside part of a body (10), a lid (12) and sealing members (16) interposed between them. The inner confinement chamber comprises a container (18) a plug (22) and sealing members (24) interposed between them. A flange (18b) of the container is supported against a shoulder (20) of the body (10). The plug (22) is pressed against the flange (18b) by fixing members (28, 30) advantageously anchored in the body (10).
