Abstract (en)

[origin: WO0137578A1] Apparatus and method for combining first and second video streams and a border color into a combined output video stream using a multiplexer (100) and a video combiner (70). The multiplexer (100) receives the first and second video streams as input and outputs a selected video stream in response to a control signal (1). The video combiner receives the border color at a first input and the selected video stream from the multiplexer at a second input and outputs a combined output based upon a key (76) received at a key input.
