Abstract (en)

[origin: EP1258325A2] Process for slicing sausages, cheese or similar foodstuffs into slices comprises applying axial pressure onto a cylindrical food product fed in a longitudinal direction to a slicing device (2) having a rotating knife (3). The food product is guided by a calibrating nozzle (7) before the inlet into the cutting plane of the knife. The food product is pulled back itself or together with the calibrating nozzle depending on the friction force between the casing surface of the product and the casing surface of the nozzle. An Independent claim is also included for a device for carrying out the above process. Preferred Features: The front surface of the nozzle is in direct contact with the cutting plane.
