Abstract (en)
[origin: EP1258847A2] A casing (10) with a fixed mounting has an adjustable sensor head (16) with a semi-spherical holding wall (17) protruding partly into the casing and a spherical cap (18) to let infrared rays through. The sensor head fastens on the casing in two positions. In a first position the spherical cap with an equator (20) runs parallel to the front facing side (13) of the casing. In a second position the spherical cap with the equator runs parallel to a front wall (15) on the casing.
