Abstract (en)

[origin: WO0162390A2] The invention relates to a top for a paper shredder, for receiving and feeding in paper, especially crumpled paper such as is found in waste paper baskets and similar; and to a method for filling a paper shredder using said top. The paper shredder has a housing consisting of a cabinet-type lower part and an optionally removable upper part, together with a cutting mechanism situated in the upper part of the housing and comprising cutting rollers and strippers, and an associated drive assembly. A feed shaft for so-called crumpled paper is provided above the cutting mechanism and the top can be permanently or optionally detachably mounted above said feed shaft. Together with a covered, worked-out top area of the upper housing part, the top forms a receiving compartment for crumpled paper. This receiving compartment is connected to the feed shaft. The invention also provides in particular that the top (11) has an integrated closing unit (20) comprising moveable parts which can change location and with which the filling opening (17) of the top (11) and the intermediate area between the receiving compartment and the feed shaft (10) can be alternately opened and closed.
