Abstract (en)

[origin: WO0164560A1] The clamp has two interacting clamping elements (14) which can move in relation to each other and are used to hold a flat object (70). The clamp (12) is also provided with an open holding element (20) which is engaged in between two parts (78, 78') of the object and which keeps said parts (78, 78') separate from each other when the clamping elements (14) are in a closed position (18'), thereby maintaining the object (70) in an open position.
