Abstract (en)

[origin: WO0164566A1] The invention relates to a method for lifting flat products (2), in particular, printed products arriving sequentially, one after the other in a conveyor process. The products (2) lie, at least partially, on a conveyor means (1) during the conveyor process. The products are actively rotated about an axis (B) against gravity, during at least a period of the lifting. Said axis is essentially parallel to the direction (A) in which the conveyor process is orientated directly before the lifting.
