Abstract (en)
[origin: EP1126098A1] The invention relates to a clamping device for clamping on a standing seam of a standing seam structure, the clamping device comprising two clamping parts (14) and a housing (11), the clamping parts (14) together defining a channel (15) for the standing seam, the clamping parts (14) being at least partially received in the housing (11). According to the invention, the clamping device further comprises clamping means (17,18) for moving the two clamping parts (14) towards each other and thereby fastening the clamping parts (14) onto the standing seam structure. <IMAGE>
