Abstract (en)
[origin: WO0165043A1] The invention relates to a closing support for a window or door leaf (2) which can be pivoted at least about a vertical axis. In order to correct a shift in the relative positions of the leaf (3) and frame (2) caused over time or by wear and tear, a support (31) which bears a supporting roller when the leaf (3) enters the frame (2) is provided in the horizontally oriented rebate area (42). The supporting roller (30) is fixed to a driving rod locking part and is offset in the direction (33) of the closing movement with regard to a groove (35) for receiving the driving rod lock.
