Abstract (en)
[origin: WO0165189A1] The invention concerns a prefabricated self-supporting gliding run segment, consisting of a multilayer composite structure including from inside outwards: a mechanical layer protecting the underlying layers (11), a heat-exchanging layer consisting of a laminated cloth based on a three-dimensional fabric impregnated with resin (13), at least a heat insulating layer (16) and an outer skin. The ice is cooled by a coolant fluid flowing in the assembly of the laminated heat-exchanging layer.
