Abstract (en)
[origin: FR2805476A1] The invention concerns a testing device for producing a biological or chemical reaction between at least a fluid, in particular biological, and at least a testing agent, said device comprising a base part (1) and a top part (2) designed to be associated one on the other so as to define a capillary circuit (3) between them, the capillary circuit (3) comprising at least a chamber (8, 9) designed to contain the testing agent, said chamber (8, 9) being connected to an upstream capillary conduit (6, 7, 15, 17, 18) enabling it to be supplied with fluid and to a downstream capillary conduit (20, 21) enabling the fluid with added testing agent to flow.
