Abstract (en)
[origin: EP1130614A1] A release or trip device for protective switching devices, in which a detection unit (1) for detecting a release/trip- event, drives a release/trip-element (2), which can engage with the latching point of a protective switching device. The release/trip-element (2) is replaceably or exchangeably arranged and mounted, and can be replaced by differently shaped release/tripping elements (2). The release/tripping element (2) is specifically designed as a hook-shaped release/trip plunger.
