Abstract (en)
[origin: EP1260151A2] A rucksack comprises a load containing portion (2) and a carrying system (4) mounted to the rear of the load containing portion (2), part at least of the carrying system (4) comprising a laminate (16) of at least two layers (12,14) of resiliently compressible cellular material, each layer (12,14) having a plurality of apertures formed therethrough, an aperture in one layer (12) overlapping part of at least of two apertures in the adjacent layer (14) whereby a matrix of interlinked cavities is established in the laminate (16) to provide a plurality of passageways between the opposed surfaces of the laminate (16). <IMAGE> <IMAGE> <IMAGE> <IMAGE>
