Abstract (en)

A chemical protective hood (20) designed to be worn over a respirator (16) in a manner such that it is located between a helmet and the respirator (16). The hood (20) has a skirt portion (22) of filter barrier material containing an opening with edges configured to surround and fit against the respirator's facepiece. A top portion of the hood (20) is formed of a thin single layer (24) that fits under the helmet and is configured to match the curved inner surface of the helmet. The thin single layer (24) allows the helmet to be comfortably donned without requiring any modification to be made to the helmet. <IMAGE>
