Abstract (en)

A glue feed unit which can be used, in particular, for machines which process wooden panels, comprises means (1) for distributing glue on the edges of panels or on bands to be applied to the edges of panels and located close to a working zone; and means (2) for feeding glue to the glue distribution means (1) through a connecting channel (3). These feed means (2) are located on a support element (4) and comprise at least one reversible airtight retaining body (5) for a glue cartridge (6), with a lower opening (7) for connection to the connecting channel (3) and pusher means (8) acting upon the cartridge (6) and designed to allow glue feed, when activated, into the connecting channel (3) and towards the distribution means (1). <IMAGE>
