Abstract (en)
[origin: EP1260643A2] The actuator (12) for height adjustment of a partition wall is mounted non-tiltingly between a room floor and ceiling. It has inner and outer telescopic profiles (13,14) which can be locked in different extended positions. The extended positions can be held by a support block (15) inserted between them. The profiles can have a projection profile (11) fitting between the two panels of the partition.
