Abstract (en)

[origin: EP1260686A2] The device has a bearer structure (4), two sensor elements (2,3) accommodated on the structure, a device for feeding at least a sub-flow (V1') of an engine induction flow (V1) to the first sensor element and a device for feeding at least a sub-flow (V2') of an air flow (V2) passing through an engine radiator to the second sensor element. The bearer structure is arranged in a region in which the two air flows run adjacent to each other.
