Abstract (en)

[origin: EP1260694A2] The method involves using the inductive energy present during the switching off of one or more inductive loads (5-7) to increase the voltage when switching on the remaining electromagnetic loads or, if an increased switch-on voltage is exceeded, supplying electrical actuators (9) in the on-board electrical system via switching elements (20-23). AN Independent claim is also included for the following: a circuit for implementing the method.

IPC 1-7

F02D 41/20; **H03K 17/64**

IPC 8 full level

F02D 41/20 (2006.01); **H03K 17/695** (2006.01); **H01F 7/18** (2006.01)
