Abstract (en)

[origin: EP1260710A2] The dosing pump has a rotatable valve/ pump member (20) to produce a connection between the pump chamber (16) and outlet area (38) or a connection between an inlet area (24) and the pump chamber. The valve/pump member can be moved in an axial direction to allow fluid to be taken up in the pump chamber from the inlet area and discharged from the pump chamber into the outlet area.
