Abstract (en)

A device for connecting conductors to electrical units such as circuit breakers and the like, comprising an oscillating member pivoted in a seat at an electrical contact to be connected to an external conductor, the oscillating member accommodating members for connecting the external conductor to the electrical contact and forming at least one active or closed position, inside the seat, and at least one open position, in which it is possible to preset the device for the particular type of connection to be performed. <IMAGE>
