Abstract (en)  
[origin: WO0166316A1] The aim of the invention is to provide a hand tool handle on which information is provided in a way that does not interfere with the operation of the tool. A handle for a hand tool, especially for a rotating tool such as a screwdriver, has a grip which is injection-moulded onto a core (30). Said handle has an essentially radially oriented front face (10) at the tool end. This front face is configured in the form of an information support.
