Abstract (en)
[origin: WO0158798A1] The present invention is organized about the concept of providing a lift to which an off road motorcycle or other vehicle is firmly attached so as to permit a user to work while standing. The stability of the present invention is attributed to the fact that the lift is firmly attached to a floor or stable platform while in turn, the vehicle is secured to the lift via a mounting plate (30). The off road motorcycle lift includes a lifting, stabilizing, and support assembly (12, 14, 16, 18) which is raised and lowered by a manual hydraulic pump (74) is adjacent to this assembly and is perpendicularly disposed upon the base plate (10) as well. A hollow tube (86) extending between the hydraulic pump and the lifting, stabilizing, and support assembly facilitates the functional engagement between these integral elements of the present invention.
