Abstract (en)
[origin: FR2805704A1] The invention concerns a terminal for testing a radiotelephone network comprising a housing including connection circuits (14, 111) for data transmissions connected to radio circuits (18) linking with the network and comprising a removable battery assembly (2) co-operating with the housing (1), and including other connection circuits (23, 24, 25) connected to the linking radio circuits (18) for data transmissions between the network and a data processing apparatus.
