Abstract (en)  
[origin: EP1262133A2] It is constituted by a single piece comprising a plate (1) having a completely flat top surface provided with a slight slope downwards at least a part of its perimeter adapted to remain flush with the floor, facilitating an access, at the said part of access there is at least one narrow oblong opening (3) communicating with a large collector located under the said plate (1) top surface and which ends in a recess (5) in which a sewer (6) is open, it comprises another part of its perimeter, not designed to be an access, which may be leaning against an inwall, and along the edge of which a raised wall (7) is extending which rises above the level of the said plate (1) top surface constituting a barrier for the liquid. <IMAGE>
