Abstract (en)
[origin: EP1262139A2] The bottom of the upper chamber (10) is perforated so that the fluid (6) can drip through onto the pile of blankets (13). The chamber is mounted in the upper part of the holder (3) and there is a spring-loaded valve mechanism (9) in its center, to allow extra fluid to drip onto the blankets. The lower part of the holder (2) has sides which slope slightly outwards and has a flat bottom supporting a table (15,18) for the blankets.
