Abstract (en)

[origin: EP1262426A1] The pallet (20) forms part of an assembly with a holder (4) attached to its underside. The holder has a number of cavities (12) to receive any liquids spilled from containers (6) being handled, with the positions of the cavities corresponding to the positions of the pallet's feet. The holder also has side walls (16) that extend over the sides of the pallet and have lugs (32) to hold them in place. The pallet has ribs (30) between upper and lower surfaces forming channels for handling vehicle forks, and apertures (28) for liquids to pass through.
